

2025-05-08 Press Release

Caeli Platform for Renewables Enters the UK Market, Opening Access to Qualified Wind Sites for Project Developers

Proven Platform for Site Assessment, Planning, and Allocation Now Live in the UK

London/Berlin, 8 May 2025 – *Caeli Platform for Renewables*, the digital platform for professional wind site development and allocation, has launched in the United Kingdom. The company builds on its success in Germany to bring a new level of efficiency, transparency, and scalability to land acquisition for wind energy. With its UK expansion, Caeli opens the door for developers across Europe to access fully assessed, high-potential sites in one of the most promising growth markets for renewables.

More Than Land Brokerage: Caeli Offers Pre-Developed Sites

Project developers benefit from sites that are already prepared and evaluated based on strict quality criteria, including:

- Layout design for turbines, crane pads and access routes
- Economic viability assessment (yield forecast, investment and O&M costs, grid connection)
- Noise, shadow flicker, and ecological assessments (including bird protection)
- On-site inspections and land title analysis
- Dialogue with local councils and early municipal coordination
- Contract negotiation and facilitation with landowners
- Landowner pooling and structured bidding processes

“The UK wind market holds enormous potential,” says Heiko Bartels, Managing Director of Caeli. “But without digital, data-driven and standardised processes, site identification and development remain limiting factors. Our platform accelerates the entire process – from site analysis to contract signature – while significantly reducing risk and uncertainty for developers.”

UK: A High-Potential Market with Political Tailwinds

The UK government has set ambitious targets for onshore wind, particularly in England where policy support has recently grown. However, developers still face a fragmented landscape with limited transparency and a lack of high-quality, developable sites. This is where Caeli’s model makes the difference.

An Attractive Entry Point for Developers

The UK launch also creates new opportunities for international developers seeking a

reliable entry into the British market. With Caeli, they gain access to sites that are already vetted for feasibility and implementation potential.

“Many European developers are looking for a structured, digital route into the UK,” adds Heiko Bartels. “We offer exactly that – a professional platform that opens access to one of the most dynamic markets in Europe.”

A Proven Model with International Reach

In 2024 alone, Caeli published sites with over 1,500 MW of wind capacity on its German platform and successfully brokered more than 30 projects. With its move into the UK, Caeli brings a tested model to a new growth market – creating value for both landowners and developers while advancing the energy transition across borders.

About Caeli Platform for Renewables

Caeli Platform for Renewables is a digital platform accelerating the development of wind energy projects. Combining AI-powered site analysis with a structured marketplace, Caeli helps landowners, developers, and investors collaborate efficiently – from initial assessment to project completion. Founded in Germany and trusted by leading energy providers, Caeli is now expanding across Europe to support the digital transformation of renewable energy development.
